

Introduction

To ensure full compliance with HTML standards and accessibility guidelines, all templates were tested using HTML validation tools. Before testing, I removed Django template tags (`{% %}`, `{{ }}`) and almost all template-related code that could interfere with validation.

Each file was wrapped in a minimal HTML structure with `<html>`, `<head>`, and `<body>` elements, including necessary meta tags, links to Bootstrap, Google Fonts, FontAwesome, jQuery, and a placeholder for custom CSS.

This approach allowed the raw HTML structure to be evaluated independently of Django logic, ensuring accurate detection of errors, warnings, and semantic issues. The report below summarizes the validation results, issues found, and solutions applied across all app templates.

HTML Validation Report

App: Bag

File: `includes/qty_update.html`

- **Result:** Passed validation successfully.
- **Notes:** No errors or warnings; markup is fully compliant and standards-ready.

File: `bag.html`

- **Result:** Minor accessibility issue flagged.
- **Issue:** `<div>` used with `aria-label` without semantic region.
- **Solution:** Added `role="region"` to provide meaningful context for screen readers.

App: Checkout

File: `checkout_success.html`

- **Issue:** Multiple `<h1>` elements or sections lacking headings.

- **Action:** Warning noted but intentionally ignored; core functionality unaffected.

File: checkout.html

- **Issues:**
 - Invalid <link> attributes
 - Missing <title>
 - Improper <main> nesting
 - Incorrect label for references
 - Sections lacking headings
- **Solutions:**
 - Fixed invalid <link>
 - Added missing <title>
 - Removed <main> from inappropriate section
 - Deleted incorrect labels
 - Ignored minor section heading warnings for non-critical layout

App: Home

File: home.html

- **Result:** Passed validation successfully.
- **Notes:** No errors or warnings; markup is clean and compliant.

App: Profiles

File: profile.html

- **Issues:** Missing headings in <section> and <article>.
- **Action:** Minor semantic warnings reviewed and intentionally ignored; functionality unaffected.

App: Pages

File: about.html

- **Result:** Passed validation successfully.

File: contact_message.html

- **Result:** Passed validation successfully.

File: faqs.html

- **Result:** Passed validation successfully.

File: privacy_policy.html

- **Result:** Passed validation successfully.

File: returns_policy.html

- **Issue:** <article> lacks explicit heading.
- **Action:** Warning ignored; does not affect layout or functionality.

App: Products

File: products.html

- **Issue:** Section at line 52 lacks a heading.
- **Action:** Ignored; layout container with sidebar and products does not require semantic heading.

File: product_detail.html

- **Result:** No issues

File: edit_product.html

- **Result:** No issues

File: add_product.html

- **Result:** No issues

Base Templates

File: base.html

- **Issue:** aria-labelledby referencing profileDropdown flagged.
- **Solution:** Replaced with aria-label="Profile options" for proper accessibility compliance.

File: search_form.html

- **Result:** No issues

Toast Templates

File: toast_error.html

- **Result:** No issues

File: toast_info.html

- **Result:** No issues

File: toast_warning.html

- **Result:** No issues

File: toast_form.html

- **Result:** No issues

File: toast_success.html

- **Issue:** <p> nested inside (invalid HTML).

- **Solution:** Wrapped `<strong>` inside `<p>`; ensures valid phrasing and block-level content.

Error Pages

File: 404.html

- **Result:** No issues

Summary

Most pages passed HTML validation with no errors. Minor accessibility and semantic warnings were addressed or intentionally ignored when non-critical. All templates are now standards-compliant and ready for production testing.
