

Pep8 validations

App Bag

The Bag app underwent comprehensive PEP8 validation using the official Code Institute CI Python Linter for PEP8 style checker. All source and test files were individually tested for syntax, indentation, spacing, and overall compliance.

Every file passed validation successfully, confirming that the code is **clean, consistent, and PEP8-compliant** with no formatting or stylistic errors.

Validated Files

App files	Test files
• context.py • models.py • urls.py • views.py	• context_tests.py • url_tests.py • view_test.py

Flake8 test

File context.py

Issues

```
gitpod /workspace/sneakup (main) $ flake8 bag/context.py
bag/context.py:5:1: F401 'django.contrib.messages' imported but unused
bag/context.py:70:21: F841 local variable 'selected_size' is assigned to but never used
gitpod /workspace/sneakup (main) $ █
```

Flake8 flagged two issues: an unused import (django.contrib.messages) and an unused variable (selected_size). I removed the unused import and used selected_size in the dictionary, resolving all warnings successfully.

```
gitpod /workspace/sneakup (main) $ flake8 bag/context.py
gitpod /workspace/sneakup (main) $ █
```

Other app files (urls.py and views.py) passed Flake8 with no warnings or errors.

Test files

bag/tests/view_tests.py initially had issues; after removal, it passed Flake8. All other test files passed without warnings or errors.

```
gitpod /workspace/sneakup (main) $ flake8 bag/tests/view_tests.py
bag/tests/view_tests.py:5:1: F401 'django.test.RequestFactory' imported but unused
gitpod /workspace/sneakup (main) $
```

App Checkout

PEP8 Validations

While testing checkout/apps.py with PEP8, E303 flagged too many blank lines and W292 missing newline at file end. Both issues were fixed, making the file fully compliant.

Webhook_handler.py

Got too long lines

```
profile.default_street_address_1 = shipping_details.address.line1
profile.default_street_address_2 = shipping_details.address.line2
profile.default_postcode = shipping_details.address.postal_code
profile.default_city = shipping_details.address.city
```

[101](#): E501 line too long (81 > 79 characters)
[102](#): E501 line too long (81 > 79 characters)

Solution

```
profile.default_street_address_1 = (
    shipping_details.address.line1
)
profile.default_street_address_2 = (
    shipping_details.address.line2
)
```

All other app files in the **Checkout app** passed PEP8 validation successfully.

Only **webhook_test.py** had a long line issue, which was fixed by breaking the line using **parentheses**, ensuring full PEP8 compliance.

Flake8 app files

Results & Issues:

1. signals.py

- Issue:** Flake8 flagged a **duplicate function name**: handle_lineitem_save defined for both post_save and post_delete.

- b. **Solution:** Renamed the `post_delete` handler to `handle_lineitem_delete`. This resolved the redefinition error and ensured clear, distinct signal handling.

2. `urls.py`

- a. **Issue:** Indentation problems (E127, E128) for continuation lines.
- b. **Solution:** Reformatted using parentheses to properly align URL patterns and eliminate indentation errors.

3. `views.py`

- a. **Issue:** Flake8 flagged an **f-string without placeholders**.
- b. **Solution:** Removed the `f` prefix, converting it to a normal string to satisfy validation.

4. `apps.py` & `admin.py`

- a. **Result:** Passed Flake8; no issues.

Summary:

All other files in the Checkout app passed Flake8. The fixes addressed **duplicate function naming, indentation, and unnecessary f-strings**, ensuring full compliance.

Flake8 test files

Checkout test files passed Flake8 with no issues. Only unused imports were flagged, which were removed, making all files fully compliant.

App Home

Validations

PEP8

All app and test files passed PEP8 validation with no errors or warnings, ensuring clean, compliant, and maintainable Python code throughout the project.

Flake8

Removed unused imports in `views.py` to resolve Flake8 warnings; all test files passed without errors, ensuring clean and compliant code.

App Pages

Validations

PEP8

App files passed PEP8 validation except models.py, which had 25 errors including long lines, missing spacing between models, and trailing spaces. All issues were corrected, making the file fully compliant.

All test files passed PEP8 validation with no errors or warnings, ensuring clean, compliant, and maintainable Python code throughout the project.

Flake 8

App Files:

- admin.py, apps.py, forms.py, models.py, urls.py — **passed** Flake8 checks with no errors.
- views.py — initially had unused imports (reverse, ContactMessage), which were removed, resolving all issues.

Test Files:

- view_tests.py — had unused imports (PrivacyPolicy, ReturnsPolicy) and an unused local variable best_selling. Fixed by removing imports and addressing variable usage.
- model_tests.py — unused imports (date, timedelta) removed; no further issues.
- admin_tests.py — unused import pages_admin removed.
- form_tests.py, url_tests.py — passed Flake8 validation with no issues.
- _tests.py — missing file, reported as FileNotFoundError.

Notes:

All other files passed without warnings or errors. Issues were mostly unused imports or variables, which were resolved to ensure Flake8 compliance.

App products

Validations

PEP8

File: products/views.py

- **Issues:** Multiple lines exceeded 79 characters (E501), some blank lines contained whitespace (W293), trailing whitespace (W291), and missing newline at end of file (W292).
- **Solution:** Lines were wrapped, extraneous whitespace removed, and a newline added at the end.
- **Result:** All errors cleared; Pep8now reports **no issues**.

Other App Files: All passed Flake8 validation without warnings or errors.

All test files for the Products app passed Flake8 validation with no warnings or errors, ensuring clean, standards-compliant code.

Flake8 tests

- **App files (admin.py, apps.py, forms.py, models.py, urls.py, views.py)**
 - All files passed Flake8 validation with **no errors or warnings**, except in views.py where:
 - F401 'ast' imported but unused
 - F841 local variable 'current_sorting' assigned but never used
 - **Solution:** Lines were marked with # noqa to ignore these harmless warnings.
- **Test files (tests/admin_tests.py, tests/form_tests.py, tests/model_tests.py, tests/url_tests.py, tests/view_tests.py)**
 - Minor Flake8 warnings in test files included:
 - Unused imports (F401)
 - Assigned but unused local variables (F841)
 - **Solution:** Removed unused imports where possible; for some variables, used # noqa to suppress Flake8 warnings.
 - All other lines passed validation with no issues.

Summary

All Products app files and test files are now **Flake8 compliant**, with intentional ignores for unused imports and variables to maintain readability and test logic.

App Profiles

Validations

PEP8

All app files and test files passed PEP8 with no errors or warnings, except views.py which had spacing, blank line, indentation, and closing bracket issues that were corrected.

Flake8 tests

App Files:

- admin.py – No errors or warnings. Fully compliant.
- apps.py – No errors or warnings. Fully compliant.
- forms.py – No errors or warnings. Fully compliant.
- models.py – No errors or warnings. Fully compliant.
- urls.py – Had minor indentation issues (E128 and E124) which were fixed; now passes validation.
- views.py – Warnings for unused imports (OrderLineItem), whitespace around {} in f-strings. Resolved using # noqa.

Test Files:

- form_tests.py, model_tests.py, url_tests.py – No errors or warnings.
- view_tests.py and views_tests.py – Some unused imports and f-string issues ignored with # noqa.

All files are now Flake8 compliant, and ignored lines do not affect functionality.

Project level

Settings

Validations

PEP8

All project-level Python files and test files passed CI linter checks with no warnings or errors. Only settings.py's AUTH_PASSWORD_VALIDATORS triggered line-length issues, which were intentionally ignored for readability.

Flake8 test

All sneakup app files passed Flake8 validation except minor issues in settings.py and urls.py.

- settings.py: long lines (E501) and unused import env (F401), intentionally ignored for readability.
- views.py: single blank line instead of two (E302), now fixed.
- urls.py: unused import and long lines, plus excessive blank lines (E303); all corrected or ignored.
- Test files passed with no warnings or errors.
